

“See II Air Foils” for Freight Trucks and Delivery Trucks

Have you always hated the way your trucks look when the backs are covered with dust, snow, and road grime? The See II Air Foil reduces the problem of keeping the rear of the truck clean, by capturing and shooting two streams of clean air down the back of the truck. As a result the truck and lights remain clean from dust, snow, and road grime buildup for a longer period of time.

A clean truck is not only a safer truck, but also projects a better image of your product. Try a See II Air Foil, you won't be disappointed.

You will see the difference immediately!
